THERMAGE

Non-invasive | Minimal downtime.

Radio Frequency energy is focussed at deeper skin layers to smooth, tighten and contour for a naturally-rejuvenated appearance.

Immediate skin-tightening and lift is visible post-treatment after one treatment with additional results in the 6 months after as Thermage® stimulates the body's natural collagen production.

PICOSURE LASER

World's first, fastest and most effective picosecond non-invasive laser. PicoSure® improves both skin tone and texture but without the long downtime common with more invasive procedures as the upper skin layer remains undisturbed. The ultra-short pulses generate tremendous acoustic pressure which shatters ink and dark pigment alike into much finer particles that the body can naturally remove after fewer sessions and with minimal side effects than previous, more heat-based lasers.
